HKUST's Fiery Comeback to ABU ROBOCON!

We've decided to reuse the team name Fiery Dragon from the previous year, as we are going to stage a comeback. We come from mechanical engineering and electronic & computer engineering of **the Hong Kong University of Science and Technology**. In our team, TONG Yiu Wai and DUAN Xi Yu are responsible for machine design and manufacturing, while KWONG Pak Ho and CHEUNG King Shan take care of electronic circuit design and soldering, and LI Xiao Yu and SHEN Shao Jie are in charge of programming and strategy forming.

All of us cooperate with each other to overcome all the difficulties and challenges we faced. We find the best way to solve the problems and come into the success finally. We are confident of achieving the champion. We believe that our enthusiasm and team spirit can lead us to the final victory.

To prepare for this competition, we have spent 9 months, from grouping to discussing the strategies, from mechanical design to electronic hardware design, from soldering to debugging. During these days, we had a very valuable experience throughout every task with teammates coming from different departments.

The completion of the project relies heavily on the cooperation of different disciplines. It is obvious that solely one department can hardly finish the whole task independently. We have developed good team spirit and friendship among us.

Participating in ABU ROBOCON is definitely a great opportunity for our team to learn and cooperate

with each other. It is not only a competition but also a challenge for us to strive against ourselves. We need to be responsible for every decision, take teammates' suggestions into consideration seriously, trust every member and have a good time management.

As a team, we have learnt that effective coordination and task distribution can help the team to work efficiently, let everyone participate actively and motivate everyone to do their best. This competition definitely gives us an unforgettable memory. Finally, thanks all people who have contributed in this project including our Professors, teaching assistants, technicians, members & helpers. Without their valuable support, we are not able to represent Hong Kong to join the Final competition in India.
